KITCHEN SINK

one of everything, with the Markdown that draws it in the README

1.1 TEXT.

Plain Markdown paragraphs justify in the Roman face. **Bold**, *italic*, underline, `typewriter`, H_2O and 10^6 all work inline, and a spaced double hyphen – like this – prints as an en dash. Links keep their words and drop the URL, because paper has no links: see the README.

Inline math sits in the line: the time constant is $\tau = RC$ and the corner is $f_c = 1/(2\pi RC)$.

$$v(t) = V_0\, e^{-t/\tau} \tag{1-1}$$

1.1.1 Lists and code.

- an unordered list item
- a second one, which wraps onto a following line when it runs long enough to need more than one line of the sheet
- a third

1. an ordered list
2. numbers itself

```
V16 N68 E      monitor range, altitude rate, altitude
V57 E          landing radar update permitted
```

1.2 TABLES.

A bare pipe table renders ruled and untitled. Wrap it in a table block to number and title it.

Mode	Gain	Rate
coarse	4.0	2.0 deg/s
fine	0.5	0.2 deg/s

Table 1-1. Thruster Quad Assignments

Quad	Axis	Thrusters	Min impulse
A	pitch, roll	A1U A2D A3A A4F	0.4 N s
B	yaw, roll	B1L B2R B3A B4F	0.4 N s
C	pitch, roll	C1U C2D C3A C4F	0.4 N s
D	yaw, roll	D1L D2R D3A D4F	0.4 N s

1.3 CALL-OUTS.

NOTE

A note is advice: nothing breaks if it is ignored.

CAUTION

A caution protects the equipment. Do not command fine mode with a quad isolated.

WARNING

A warning protects the crew. It is boxed so it cannot be missed.

1.3.1 Change bars.

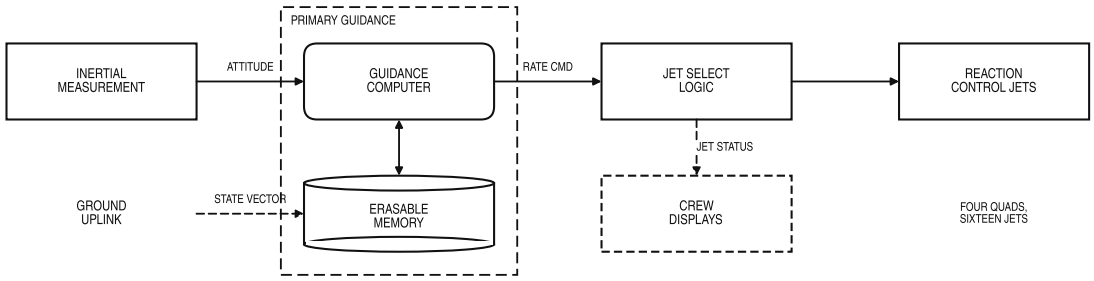

Anything inside a changed block gets a black bar in the left gutter, the handbook's way of saying "this paragraph is new since the last issue".

QUAD ISOLATION	CDR
QUAD A ISOL VLV	CLOSE
verify talkback	BARBERPOLE
RCS SYS A/B	CHECK PRESS
ATT CONTROL	MODE CONT

FIGURES

1.4 BLOCK DIAGRAMS.

Nodes sit on a grid of columns and rows. Shapes: box, round, drum (storage), dash (outside the system) and text (lettering only). A fence draws a dashed boundary round a subsystem; edges may be dashed, two-headed and labelled.

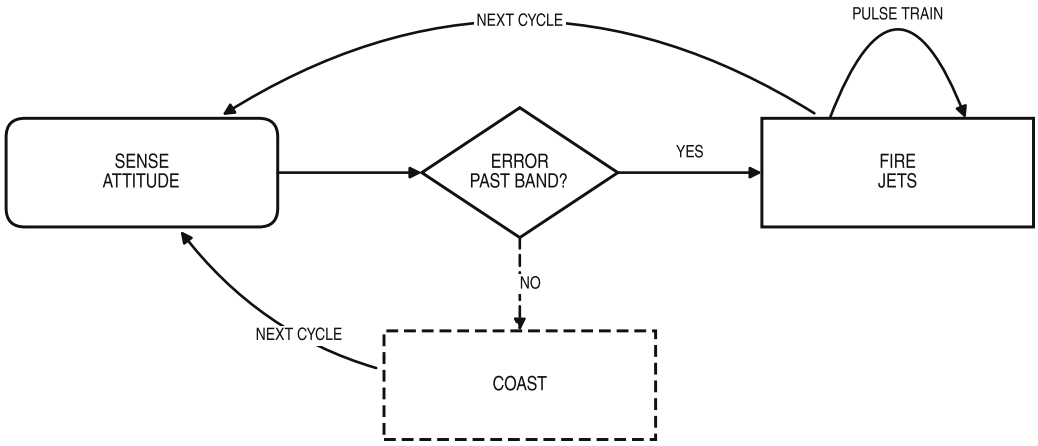

KIT-501A

Figure 1-1. Attitude Control Functional Diagram, Every Shape and Edge

1.5 GRAPHS.

A diagram is also a graph: a diamond is a decision, `bend=` curves a back-edge, and a loop returns a node to itself.

KIT-502A

Figure 1-2. Attitude Hold, a Decision Loop

1.6 TIMELINES.

Bars may be hatched, open or solid; marks are vertical lines with a label above, and a call drops a leader from a bar to lettering below the axis.

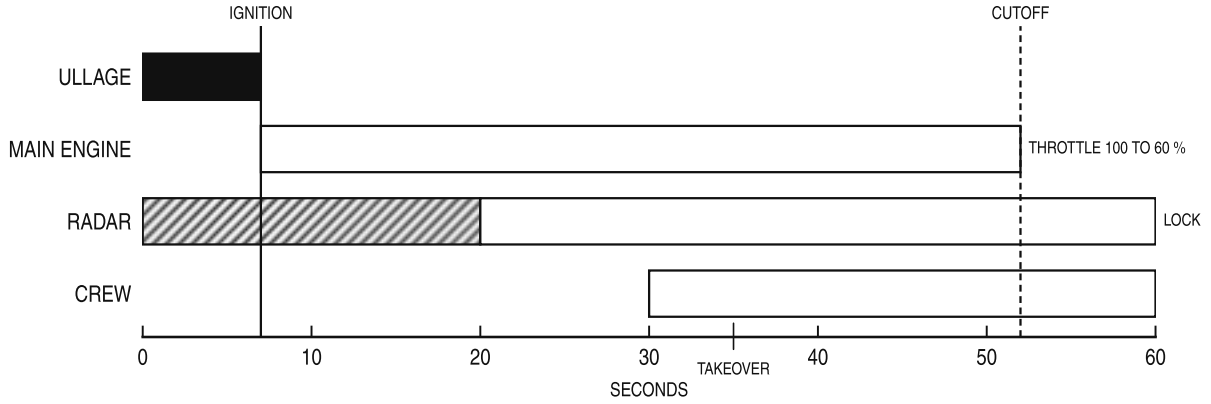

Figure 1-3. Sequence of Events, Every Bar and Mark

1.7 PLOTS.

Lines come from a CSV and are labelled at their right ends instead of with a legend; marks draw a vertical line. Log axes are a single line.

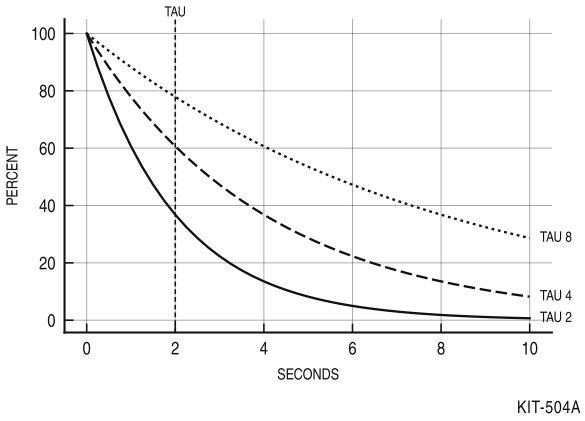

Figure 1-4. Decay of Three Time Constants

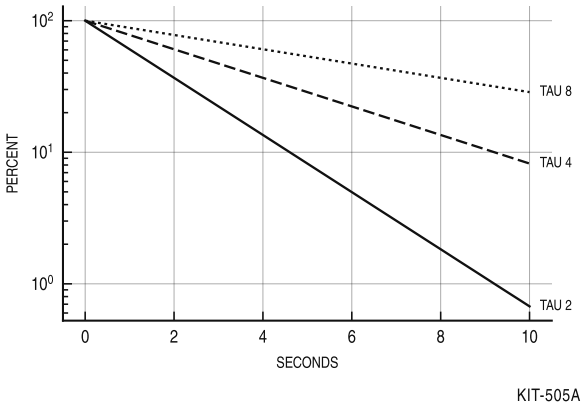

Figure 1-5. The Same, on a Log Axis

1.8 PANELS.

A panel line starts a second panel under the first, on the same x; fn takes degrees() and radians().

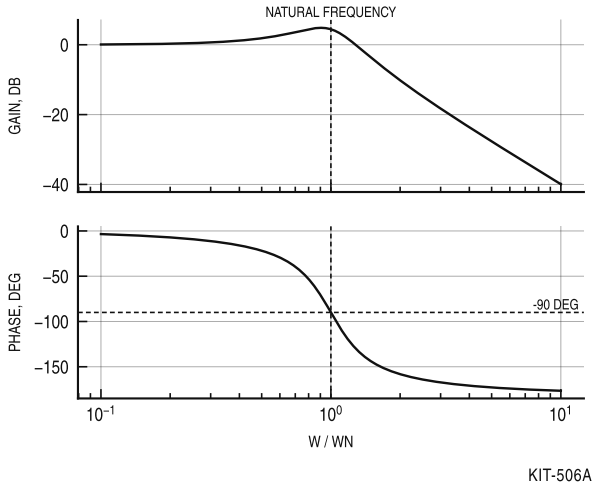

Figure 1-6. Rate Loop, Gain and Phase

1.9 STACKS AND BIT FIELDS.

A stack sets layers top to bottom; a bit field wraps fields into rows of bits, hatching the reserved ones.

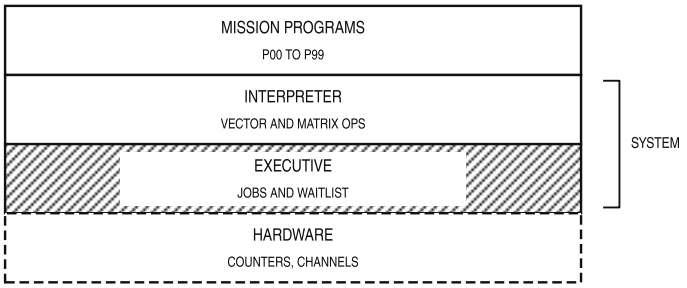

Figure 1-7. Flight Software Layers

1.10 BARS AND MATRICES.

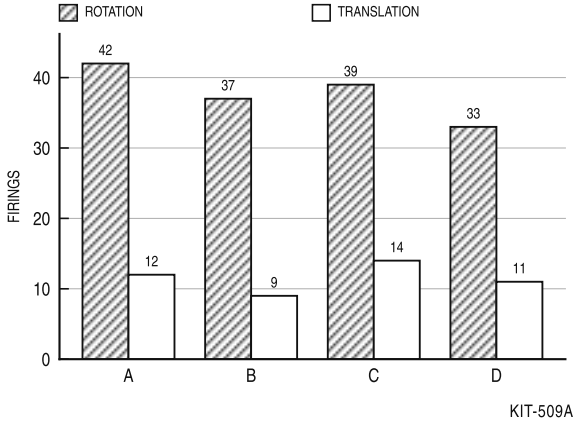

Figure 1-9. Firings by Quad

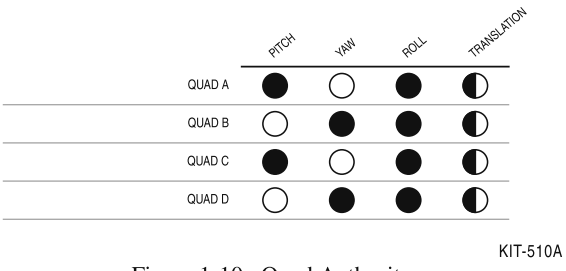

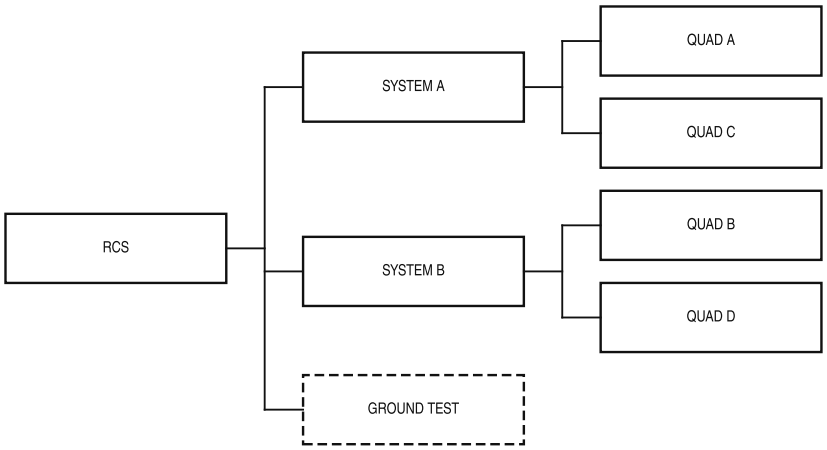

Figure 1-10. Quad Authority

1.11 TREES.

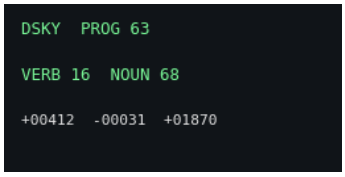

KIT-511A

Figure 1-11. Reaction Control, by System

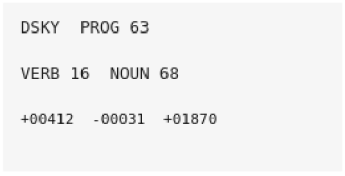

1.12 IMAGES.

Any SVG or PNG. Width may be half or third; gray=1 prints a dark screen capture as ink on paper.

KIT-512A

Figure 1-12. A screen capture, as captured

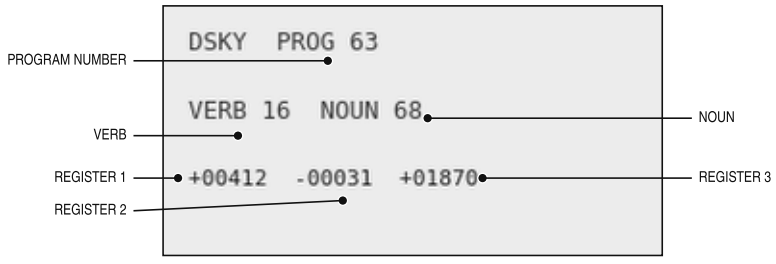

KIT-513A

Figure 1-13. The same capture with gray=1

1.13 CALLOUTS.

Leaders from points on a picture to lettering in its margins, on the nearer side.
